random tile

The **Random tile**, developed and patented by Island Stone, brings a unique and dramatic design statement to any space. The look is of random shaped and sized stones flowing near seamlessly across the chosen area.

The unique interlocking design makes it nearly impossible to pick out where individual tiles start and stop. On a wall, a floor, or across both, the effect is stunning. The range of stones and colours makes for endless options.

Island Stone Random Borders are an incredibly versatile decor item. Primarily designed for use with any ceramic or solid stone tile, they also make an attractive feature when used with contrasting colours or with other materials such as concrete, brick and timber.
