palms glass tile cutting

Due to the unique mosaic shape and thin structure of the Island Stone Palms Mosaic, it is integral to follow the below instructions when cutting pieces to fit installation area.

Overview. Due to shape and thickness, material is susceptible to chipping at the end of a cut. This generally occurs on the acute angle. To avoid this affecting installed material it is important to cut end pieces so that chipping occurs on the waste material side of the cut.

The below instructions offer a pictorial on cutting the palms

Step 1: Separate full piece into 2 halves

Step 2. The below pictorial shows direction of cuts on the top half of tile for cuts required to finish of either the front or back of the tile. The same approach should be mirrored when cutting the bottom half of the tile.
