

One Set of Two Tiles
Nested Together

Preferred Layup

- The VSquared Cladding is a meshed two piece tile and is packaged nested face to face together. The most popular pattern is to set these tiles in succession as they come out of the box.
- One tile is Peaked at the center and the other is Valleyed at center.
- On the 1st row place a peaked and then a valley tile in succession, in a 1,2 then 1,2 method.
- On the 2nd row, do the opposite and place a valley and then a peaked tile; in a 2,1 then 2,1 method.
- On the 3rd row, return to the 1,2 1,2 method and so on up the wall
- When completed in this manner a subtle but pleasing pattern with appear.
- It is also possible to cut the back of the mesh to free the tile to acheive many other layups.
- For adhesion questions, please refer to instructions for The Cladding Series.
